Claim Rejections - 35 USC § 103

Page 2

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

- (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 2. Claims 1 and 12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Cain (U.S. 4905233) in view of Redi (U.S. 6621795).
- 3. Regarding claim 1, Cain teaches (fig. 3) a method of routing traffic from a source node to a destination node in a mesh topology network connected to a plurality of hosts, having a plurality of nodes that are routers, having a source node (1) and a destination node (5) and a plurality of links (CL12, CL13, CL34, CL45) connecting the nodes, comprising: computing a node metric for each node reflecting the congestion level of the node (col. 6, lines 58-67); determining a path metric for each path of a plurality of paths from source to destination (col. 1, line 60 col. 2, line 14); allocating the load from source to destination to the plurality of paths according to the path metric (col. 2, lines 15-23).
- 4. Cain does not teach accounting for future scheduled traffic.
- 5. Redi teaches (col. 4, lines 14-49) accounting for future scheduled traffic. It would have been obvious to one of ordinary skill in the art increase quality of service within the system.
- 6. Regarding claim 12, Cain teaches (fig. 3) a method of routing traffic from a source node to a destination node in a mesh topology network connected to a plurality of hosts, having a

Art Unit: 2665

plurality of nodes that are routers, having a source node (1) and a destination node (5) and a plurality of links (CL12, CL13, CL34, CL45) connecting the nodes, comprising: computing a node metric for each node by calculating a metric contribution for each link (col. 6, lines 58-67); determining a path metric for each path of a plurality of paths from source to destination (col. 1, line 60 – col. 2, line 14); allocating the load from source to destination to the plurality of paths according to the path metric (col. 2, lines 15-23).

- 7. Cain does not teach accounting for future scheduled traffic.
- 8. Redi teaches (col. 4, lines 14-49) accounting for future scheduled traffic. It would have been obvious to one of ordinary skill in the art increase quality of service within the system.

Allowable Subject Matter

9. Claims 3-11 and 13-20 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

1. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Roberta A Shand whose telephone number is 571-272-3161. The examiner can normally be reached on M-F 9:00am-5:30pm.

Application/Control Number: 10/056,178 Page 4
